Area of Irregular Shapes

Suitable for students
aged 9-11

This pack is suitable for learners aged 9-11 years old or 5th and 6th graders (USA). The content covers fact files and relevant basic and advanced activities involving area of irregular shapes.

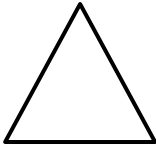

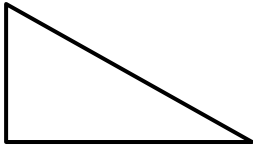

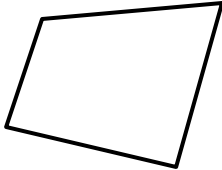

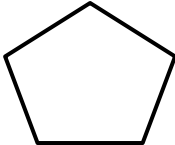

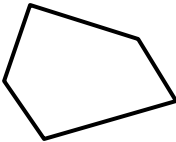

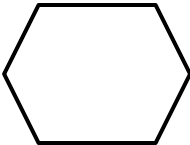

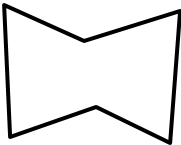

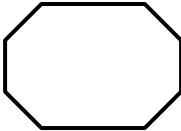

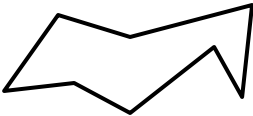

Hi! I am Nicholas.
Come and learn how
to solve the area of
irregular shapes.

- Irregular shape is a shape that has angles of different sizes and sides of different lengths.
- Compared to regular shapes, irregular shapes are often much harder to name because don't look like the more conventional regular shapes.

DIFFERENTIATING REGULAR SHAPES AND IRREGULAR SHAPES

Name	Regular	Irregular	Number of Sides
Triangle			3
Quadrilateral			4
Pentagon			5
Hexagon			6
Octagon			8

Notice how the regular shapes differ from irregular shapes. Observe the sides of the shape as well as the angles.

FINDING THE AREA OF THE IRREGULAR SHAPES

In finding the area of irregular shapes, you need to divide the irregular shape into regular shapes that you know such as rectangle, triangle, square, circle and etc.

Example:

Now, we can find the total area of the irregular shape by adding the areas of the regular shapes which we obtained from dividing the irregular shape.

AREA OF REGULAR SHAPES

Rectangle

Formula: $A = l \times w$

Where

- l = length
- w = width

Square

Formula: $A = x^2$

Where

- x = side length of the square

Triangle

Formula: $A = \frac{1}{2} (b \times h)$

Where

- b = base
- h = height

Circle

Formula: $A = \pi r^2$

Where

- r = radius

LET'S PRACTICE!

- 1.) Divide the irregular shape into regular shapes.
Illustrate it here.

- 2.) Find the total area of the irregular shape. Show your solution on the space provided.
