## Dividing Whole Numbers Up To Four Digits

**GRADE 4**

Division can be thought of as the method of distributing a group of things into equal parts. The mathematical method can be done into 1 or more numbers or digits as its goal is to distribute or minimize the value of numbers equally.

Today is my birthday! I wanted to share my cake with my 6 friends. If my cake breaks into 12 pieces, how many slices will each one have?

### DIVISION

- ❖ It is the splitting of numbers into equal parts or groups
- ❖ The  $\div$  symbol is used in division

### DIVISION SENTENCE

$$\begin{array}{c} \text{DIVISOR} \\ 50 \div 10 = 5 \\ \text{DIVIDEND} \qquad \qquad \qquad \text{QUOTIENT} \end{array}$$

## EXAMPLES / EXERCISES ON DIVIDING WHOLE NUMBERS

### DIVIDING WHOLE NUMBERS

Dad ordered flowers for my birthday. A florist has 3,080 flowers. If she makes a bouquet with 7 flowers, how many bouquets can she make?

$$3,080 \div 7 = 440 \text{ bouquets}$$

$$4,642 \div 22 = 211$$

$$6,127 \div 11 = 557$$

Solve for the quotient of the following problems.

The clown has 2,485 balloons. The balloons were divided equally into 7 bags. How many balloons were in each bag?

Charina's party had 356 doughnuts. She put them into 4 cases with the same number in each case. How many doughnuts were in each case?
