Dividing Whole Numbers by Fractions

GRADE 5

When dividing a whole number by a fraction, we are calculating how many groups of the fraction we can fit in the whole. The usual way of dividing a whole number by a fraction is to multiply the whole number by the reciprocal of the fraction.

Karen bought 3 sacks of flour. If this is $\frac{2}{5}$ of the number that she needs to buy, how many sacks of flour does she need?

Given: $3 \div \frac{2}{5} = ???$

STEPS

STEPS IN DIVIDING FRACTION BY WHOLE NUMBER

Karen bought 3 sacks of flour. If this is $\frac{2}{5}$ of the number that she needs to buy, how many sacks of flour does she need?

Given: $3 \div \frac{2}{5}$

Step 1: Get the reciprocal of the fraction. Just interchange the numbers in the numerator and denominator.

The reciprocal of $\frac{2}{5}$
is $\frac{5}{2}$.

Step 2: Multiply the whole number to the numerator of the fraction. Simplify if necessary.

$$3 \times \frac{5}{2} = \frac{3 \times 5}{2} = \frac{15}{2}$$

She needs $15/2$ sacks of flour.

MORE EXAMPLES

Given: $5 \div \frac{1}{2}$

Step 1: Get the reciprocal of the fraction. Just interchange the numbers in the numerator and denominator.

The reciprocal of $\frac{1}{2}$
is $\frac{2}{1}$.

Step 2: Multiply the whole number to the numerator of the fraction. Simplify if necessary.

$$5 \times \frac{2}{1} = \frac{5 \times 2}{1} = 10$$

Try this...

$$12 \div \frac{2}{3} = ???$$

$$8 \div \frac{4}{5} = ???$$

DIVIDING FRACTION BY WHOLE NUMBER

Example: $\frac{2}{5} \div 4$

Step 1: Multiply the bottom number of the fraction by the whole number.

$$\frac{2}{5 \times 4} = \frac{2}{20}$$

Step 2: Simplify the fraction.

$$\frac{2}{20} = \frac{1}{10}$$
