## Multiplication of Decimals

Suitable for students  
**aged 9-11**

This pack is suitable for learners aged 9-11 years old or 5th to 6th graders (USA). The content covers fact files and relevant basic and advanced activities involving multiplication of decimals.

### Key Concepts:

- A decimal number refers to a number whose whole number part and the fractional part is separated by a decimal point.
- In multiplying decimals, here are the steps to follow:
  - Multiply the decimals like whole numbers.
  - Count the number of the decimal places.
  - Put the same number of places after the decimal point of the product.

What is the product of 22.69 and 4.19? Is it less than or greater than 100?

## ILLUSTRATIVE EXAMPLES

Find the product of the following decimals.

$$\begin{array}{r} 1) \quad 7.48 \\ \times \quad .3 \\ \hline \end{array}$$

$$\begin{array}{r} 2) \quad 12.39 \\ \times \quad .11 \\ \hline \end{array}$$

$$\begin{array}{r} 3) \quad 1.39 \\ \times \quad .204 \\ \hline \end{array}$$

### Solutions:

$$\begin{array}{r} 1) \quad 7.48 \\ \times \quad .3 \\ \hline 2.244 \end{array}$$

### Explanation:

If you will treat the given as whole numbers, the answer will be 2244. But since we are dealing with decimals, the number of decimal places of multiplicand and multiplier is important. The first has two decimals places while the second has one. Thus, there is a total of three decimals places. The final product is 2.244.

$$\begin{array}{r} 2) \quad 12.39 \\ \times \quad .11 \\ \hline 1239 \\ 1239 \\ \hline 1.3629 \end{array}$$

$$\begin{array}{r} 3) \quad 1.39 \\ \times \quad .204 \\ \hline \end{array}$$
